RUBBER FACTORY

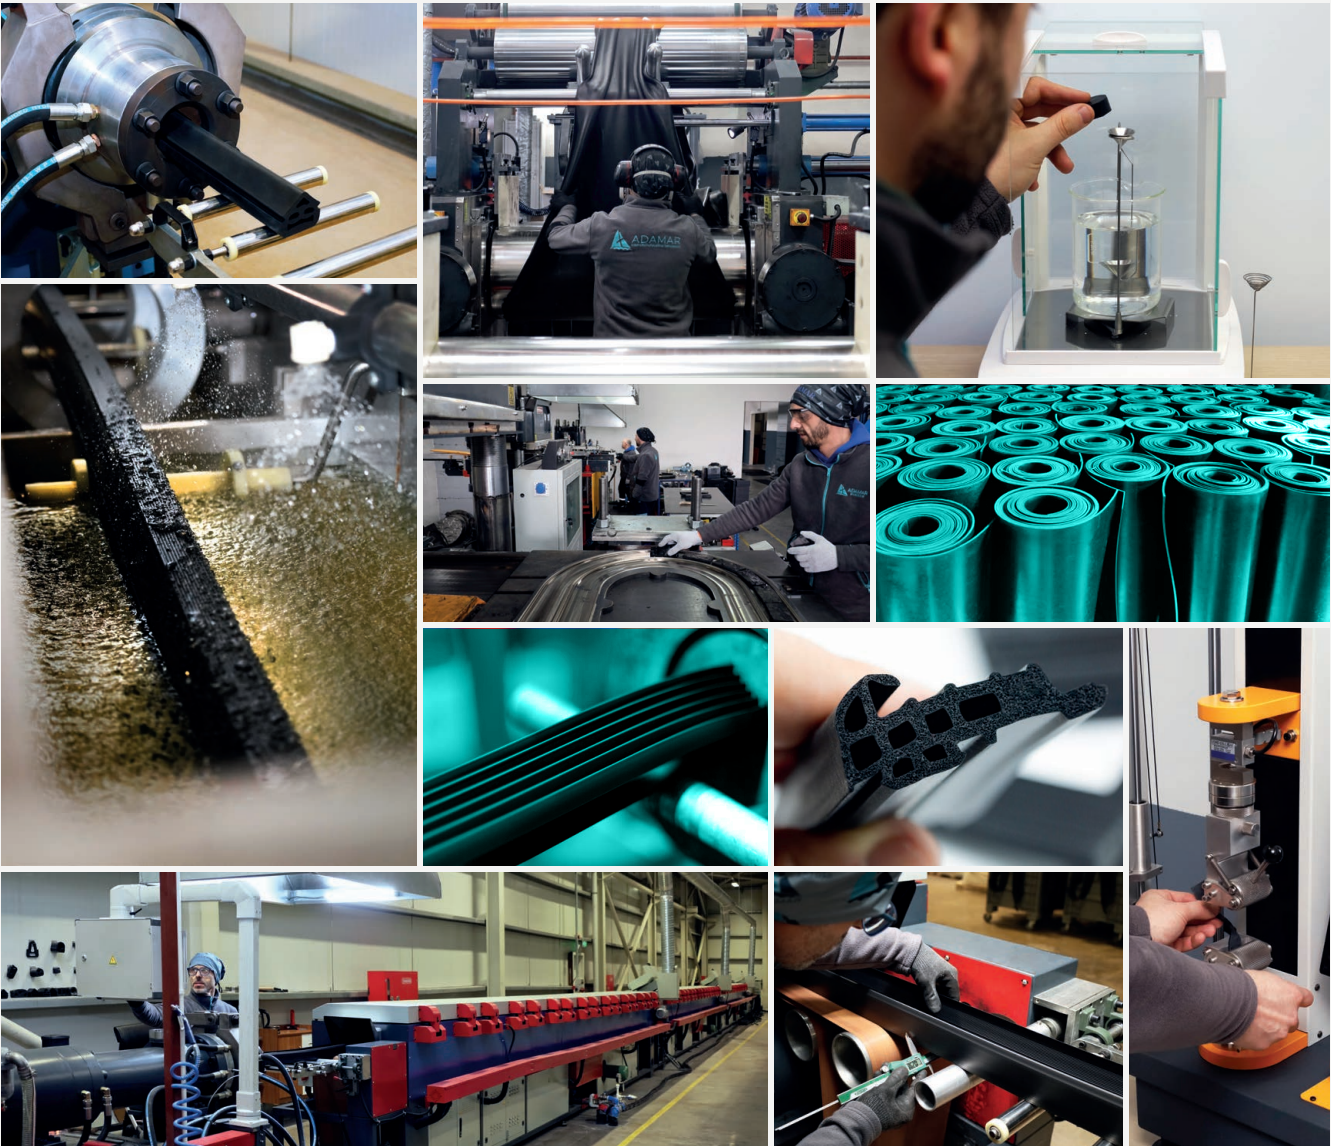

adamarrubber.com

WHO WE ARE

ADAMAR RUBBER operates under ADAMAR GROUP, which was established in 2003. Alongside a corporate culture built over decades, we demonstrate a firm commitment to ethical commercial principles and maintain a strictly customer-centric approach.

ADAMAR RUBBER provides professional industrial rubber solutions, specializing in both extrusion manufacturing and high-precision compression molding. Our facility is equipped with rubber compounding machines, advanced extrusion lines, and hydraulic presses. This infrastructure allows us to produce an extensive range of rubber profiles and technical moulded parts to the highest standards. We work closely with our customers from design to serial production, delivering reliable rubber components for demanding industrial environments.

Technical Oversight

Our In-house Laboratory
Every stage of our production is monitored under the principle of "measurable quality" within our specialized laboratory.

Tensile & Elongation Testing

We analyze the strength and elongation values of our products to ensure maximum durability in the field.

Precision Density Measurements

We maintain constant control over the compliance and chemical stability of our rubber compounds using modern equipment.

Physical Quality Verification

Every step, from raw material to the final product, is meticulously tracked to ensure full compliance with technical specifications.

We utilize our testing infrastructure to guarantee the mechanical and physical performance of our products.

INDUSTRIES SERVED

Industrial Rubber Solutions for Multiple Sectors

ADAMAR Rubber supplies custom rubber profiles and moulded rubber components for a wide range of industrial sectors.

Leveraging advanced multi-sector manufacturing and in-house rubber compounding expertise, we deliver high-performance EPDM, NBR, CR, SBR, VITON, and Natural Rubber solutions, precisely engineered for the most demanding industrial applications.

Machinery & Equipment Manufacturing

Custom rubber profiles, vibration mounts, buffers and sealing components for industrial machines and production equipment.

Applications include machine housings, protective edging, vibration isolation and technical rubber parts.

Construction & Building Systems

Window sealing profiles, glazing profiles, sponge rubber profiles and weather-resistant EPDM components for building and construction applications.

Used in aluminum systems, doors, windows and facade installations.

Electrical & Control Panels

Rubber sealing profiles and gaskets for electrical cabinets and control panels, ensuring dust, moisture and vibration protection.

HVAC & Technical Installations

Rubber profiles, sponge seals and tubing for ventilation systems, duct sealing and technical insulation.

Marine & Shipbuilding Applications

Rubber profiles, sealing components and moulded rubber parts for shipyards, onboard equipment and marine technical systems.

Used in hatch covers, access panels, machinery sealing and vibration isolation.

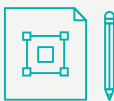

General Industrial Applications

Rubber sheets, tubes, O-rings and custom moulded parts for various industrial environments including material handling, automation systems and equipment protection.

Metal Works & Precision Engineering

Our in-house workshop (3-axis CNC, lathe, laser) delivers integrated metal-rubber solutions. We provide rapid tooling, metal-bonded components, and precision custom parts, streamlining your project from design to finished product in one single location.

OEM & Custom Projects

We support OEM manufacturers and project-based customers with custom-designed rubber components produced according to drawings or samples.

Scalable Strength: Annual Capacity of Over 4,000 Tons

We demonstrate our competitive power through a robust manufacturing infrastructure. With an annual processing capacity of 4,000 tons and above, we stand as a reliable partner for your large-scale projects. This significant production volume allows us to meet extensive demands rapidly and adhere to the strictest deadlines without ever compromising on quality.

INDUSTRIAL RUBBER PRODUCTS

ADAMAR Rubber manufactures a wide range of industrial rubber products using EPDM, NBR, NEOPRENE (CR), SBR, VITON and Natural Rubber compounds.

Extruded Rubber Profiles

Continuous rubber profiles produced for sealing, edge protection and vibration control applications. Typical applications include industrial doors, machinery enclosures, electrical panels and construction systems.

- Window Sealing Profiles
- Glazing Profiles
- Sponge Rubber Profiles
- Solid Rubber Profiles
- Edge Protection Profiles
- Custom Designed Profiles

Moulded Rubber Parts

Low to medium volume moulded rubber components produced according to customer drawings or samples. These parts are commonly used for vibration isolation, equipment protection and mechanical support.

- Rubber Vibration Mounts
- Rubber Buffers And Bump Stops
- Machine Feet Pads
- Simple Rubber Blocks
- Rubber Seal and Gaskets
- O-Rings and Custom Rubber Components
